

CSE0001: Digital Literacy Project Report

Name: Rachit Chaubey

Reg No.: 25BAI10703

Branch: Computer Science (AI & ML) Engineering

Course Code: CSE0001

Date: March 31, 2026

Introduction

This project was completed as part of the Digital Literacy course requirements for the Student Digital Ambassador role. The primary objective was to build a comprehensive Digital Literacy Portfolio that demonstrates proficiency in professional online presence, digital security, and collaborative tools.

This report documents the completion of five specialized tasks—ranging from creating awareness infographics to researching cybercrime prevention—all organized within a professional GitHub repository.

Task 1 Write-up: Digital Literacy Awareness Infographic

For this task, I designed a one-page visual resource using Canva to help my peers understand the pillars of digital literacy. My infographic focuses on three key areas:

- Professional online presence
- Safe internet practices
- Essential digital tools for engineering students

One interesting aspect of this task was learning how to simplify complex information into a visually engaging format. The most difficult part was choosing which information to prioritize to ensure the design remained clean and readable.

Task 2 Write-up: Build Your Student Digital Portfolio

I established professional profiles on GitHub, LinkedIn, and Stack Overflow.

- LinkedIn serves as my primary professional network for connecting with the academic community.
- GitHub acts as a technical gallery for my coding projects.

- Stack Overflow allows me to engage with developer Q&A to solve technical problems.

Over the next four years, I plan to use these platforms as a **“living resume”** by consistently updating my skills, projects, and certifications to remain competitive for internships and future career opportunities.

Task 3 Write-up: Explore Coding & Collaboration Platforms

I utilized HackerRank to complete a beginner-level coding challenge, which helped me familiarize myself with competitive programming environments.

Additionally, I built a **Digital Literacy Awareness Quiz** using Google Forms, which is linked to a Google Sheet for response tracking.

These tools will be highly useful in my academic career for:

- Collecting research data
- Practicing programming logic
- Collaborating effectively in team projects

Mastering cloud collaboration through Google Workspace ensures efficient teamwork in engineering projects.

Task 4 Write-up: Professional Email & Etiquette Guide

Digital communication is a core skill for any professional. I drafted two professional emails:

- One requesting a deadline extension from a professor
- Another expressing interest in an internship opportunity

Through this, I learned that:

- Clear subject lines are very important
- A respectful tone matters more than message length

A common communication mistake is unclear subject lines, which can lead to missed opportunities. A structured approach helps avoid such misunderstandings.

Task 5 Write-up: Cybercrime Awareness & Prevention

While researching phishing and UPI fraud, I was surprised by how advanced social engineering tactics have become, especially targeting college students in India.

One habit I will change is:

- Enabling two-factor authentication (2FA) on all financial accounts
- Being cautious of unknown or suspicious links

I also learned about the **National Cyber Crime Portal (1930)**, which provides support in case of online fraud and helps protect users from cyber threats.

Conclusion

This project has significantly enhanced my digital literacy by helping me move from being a passive user of technology to an active and professional participant in the digital world.

I have learned how to:

- Manage my digital presence
- Communicate professionally
- Protect myself from online risks

These skills form the foundation of my professional identity as a Computer Science student at VIT Bhopal.
